

# Installation, Storage, and with Windows Server 2016

Course: 20740

## Course Details

Audience(s): IT Professional(s)

Technology: Windows Server 2016

Duration: 40 Hours

## ABOUT THIS COURSE

This five-day course is designed primarily for IT professionals who have some experience with Windows Server. It is designed for professionals who will be responsible for managing storage and compute by using Windows Server 2016, and who need to understand the scenarios, requirements, and storage and compute options that are available and applicable to Windows Server 2016.

## AUDIENCE PROFILE

This course is intended for IT professionals who have some experiencing working with Windows Server, and who are looking for a single five-day course that covers storage and compute technologies in Windows Server 2016. This course will help them update their knowledge and skills related to storage and compute for Windows Server 2016. Candidates suitable for this course would be:

- Windows Server administrators who are relatively new to Windows Server administration and related technologies, and who want to learn more about the storage and compute features in Windows Server 2016.
- IT professionals with general IT knowledge, who are looking to gain knowledge about Windows Server, especially around storage and compute technologies in Windows Server 2016.

## Course Content

### Module 1: Installing, upgrading, and migrating servers and workloads

#### Lessons

- Introducing Windows Server 2016
- Preparing and installing Nano Server and Server Core
- Preparing for upgrades and migrations
- Migrating server roles and workloads
- Windows Server activation models

**Lab : Installing and configuring Nano Server**

### Module 2: Configuring local storage

#### Lessons

- Managing disks in Windows Server
- Managing volumes in Windows Server

**Lab : Configuring local storage**

### Module 3: Implementing enterprise storage solutions

#### Lessons

- Overview of DAS, NAS, and SANs
- Comparing Fibre Channel, iSCSI, and Fibre Channel over Ethernet
- Understanding iSNS, DCB, and MPIO
- Configuring sharing in Windows Server 2016

**Lab : Planning and configuring storage technologies and components**

### Module 4: Implementing Storage Spaces and Data Deduplication

#### Lessons

- Implementing Storage Spaces
- Managing Storage Spaces
- Implementing Data Deduplication

**Lab : Implementing Storage Spaces**

**Lab : Implementing Data Deduplication**

## Module 5: Installing and configuring Hyper-V and virtual machines

### Lessons

- Overview of Hyper-V
- Installing Hyper-V
- Configuring storage on Hyper-V host servers
- Configuring networking on Hyper-V host servers
- Configuring Hyper-V virtual machines
- Managing virtual machines

**Lab : Installing and configuring Hyper-V**

## Module 6: Deploying and managing Windows and Hyper-V containers

### Lessons

- Overview of containers in Windows Server 2016
- Deploying Windows Server and Hyper-V containers
- Installing, configuring, and managing containers by using Docker

**Lab : Installing and configuring containers**

## Module 7: Overview of high availability and disaster recovery

### Lessons

- Defining levels of availability
- Planning high availability and disaster recovery solutions with Hyper-V virtual machines
- Backing up and restoring by using Windows Server Backup
- High availability with failover clustering in Windows Server 2016

**Lab : Planning and implementing a high availability and disaster recovery solution**

## Module 8: Implementing failover clustering

### Lessons

- Planning a failover cluster
- Creating and configuring a new failover cluster
- Maintaining a failover cluster
- Troubleshooting a failover cluster
- Implementing site high availability with stretch clustering

**Lab : Implementing a failover clustering**

**Lab : Managing a failover cluster**

## Module 9: Implementing failover clustering with Windows Server 2016 Hyper-V

### Lessons

- Overview of the integration of Hyper-V Server 2016 with failover clustering
- Implementing Hyper-V VMs on failover clusters
- Key features for VMs in a clustered environment

**Lab : Implementing failover clustering with Windows Server 2016 Hyper-V**

## Module 10: Implementing Network Load Balancing

### Lessons

- Overview of NLB
- Configuring an NLB cluster
- Planning an NLB implementation

**Lab : Implementing NLB**

## Module 11: Creating and managing deployment images

### Lessons

- Introduction to deployment images
- Creating and managing deployment images by using MDT
- Virtual machine environments for different workloads

**Lab : Using MDT to deploy Windows Server 2016**

## Module 12: Managing, monitoring, and maintaining virtual machine installations

### Lessons

- WSUS overview and deployment options
- Update management process with WSUS
- Overview of Windows PowerShell DSC
- Overview of Windows Server 2016 monitoring tools
- Using Performance Monitor
- Monitoring event logs

**Lab : Implementing WSUS and deploying updates**

**Lab : Monitoring and troubleshooting Windows Server 2016**

## At This Course Completion

At completing this course the student will be able to:

- Prepare and install Nano Server, a Server Core installation, and plan a server upgrade and migration strategy.
- Describe the various storage options, including partition table formats, basic and dynamic disks, file systems, virtual hard disks, and drive hardware, and explain how to manage disks and volumes.
- Describe enterprise storage solutions, and select the appropriate solution for a given situation.
- Implement and manage Storage Spaces and Data Deduplication.
- Install and configure Microsoft Hyper-V.
- Deploy, configure, and manage Windows and Hyper-V containers.
- Describe the high availability and disaster recovery technologies in Windows Server 2016.
- Plan, create, and manage a failover cluster.
- Implement failover clustering for Hyper-V virtual machines.
- Configure a Network Load Balancing (NLB) cluster, and plan for an NLB implementation.
- Create and manage deployment images.
- Manage, monitor, and maintain virtual machine installations.
